

PLASTIC PRODUCTS WITH HIGH STRENGTH AND FLEXIBILITY**ABSTRACT OF THE DISCLOSURE**

The invention relates to plastic products with high strength and flexibility, having 10 to 50 mass % of at least one crosslinked thermoplast and 90 to 50 mass % of at least one crosslinked melamine resin ether. The invention further relates to a method for production of such a plastic product. The aim of the invention is the production of plastic objects in thermoplastics and duroplastics which can be produced by thermoplastic methodology and which have improved material properties.
